To customize a clock widget or live wallpaper clock: Open the Clock app -> Find the watch you want to customize -> Your changes will be saved automatically when you sign out of the app. - Custom clock styles can now be saved. - Better battery visibility. - Option to tag watches. - Ads can now be removed. - More fonts. Who wants to take a smartphone out of their pocket that only has a few boring numbers? Do not own devices that run the Android operating system, which are able to change any element of their phone interface. Watch widgets apps are no exception. They're easy to find in the Google Play app store, but choosing something really worthwhile is pretty difficult. However, we've already done it for you. So, which widgets deserve to show time on your device? The Xperia Digital Clock Widget Xperia Xperia is a minimalist digital watch with a myriad of settings, functionality and applets. The program is an electronic watch for Connie with an interface painted in the style of Sony Xperia. You can adjust the font color and size, the background (presence, color, and transparency), the display of the date and time. When you bring the app to the desktop, you can choose its size (smaller than 2x1 cells, and larger - 4x2), as well as the information displayed on it. Besides, the date and time, the widget can display brief weather information (touch the widget for detailed forecasting), alarm information and battery drama. You can also set up the widget with all the information you need on your device's lock screen on most devices with the Android OS version 4.2 or higher. This version of Digital Clock accessed this version of Digital Clock and free Wi-Fi is available. For users who purchase the full version, 9 additional fonts will be available, automatic placement of the device for the most accurate weather forecasting, adjusting the transparency of the background, as well as a complete lack of advertising. Downloads: 1000000 + Customer Rating: (4.2/ 5) You can also like: 7 best watch widget apps with seconds for Android Sense Flip Clock & Weather Sense Flip Clock and weather is a functional widget, fully customizable of digital clock and weather forecast. The interface and capabilities. The widget has a wide variety of settings, allowing each user to choose their own style and format to display on the desktop of the gadget's screen. The app is available for free, but it has advertising. If you want to disable it, you must purchase a paid version. Like many widgets for Android, this app is multi-jimage. You can set the display language you want on the menu. The program automatically determines the location and always provides up-to-date weather data, showing local time as well as the exact time of sunrise and sunset. In addition, the widget displays active alerts, calendar events, and other necessary information. Downloads: 5000000 + Customer Rating: (4.4/5) This watch will be the first watch widget app you find in the app store. It has the largest number of downloads. As a rule, it is used by default on Android smartphones. Some of you will probably be surprised: why install a watch from Google on your phone, as it's already in

use on your phone. In short, this app has some differences with standard watches. The application is divided into an alarm clock, clock, timer, and timer. The formatting of some elements has changed. In the alarm clock, there are slightly more settings. This will allow you to set up to 100 signals. You can add a text description to any type or repeating state (so as not to forget important meetings or regular matters). Many built-in melodies allow you to choose the type of signal for each flavor. You didn't like it? Then set your favorite song from the audio recordings on your device as a sign. The working-time function will allow you to keep track of time, as well as view information about previous blues starts - an idly idly available option in fast competitions. Time itself is also made with a stylish design with a circular time scale. The interface itself is made in dark colors. In addition to functionality, clock contains general settings. In particular, with it you can: change the clock style seconds digital or analog display when viewing time Time on two dialers – at home and roaming or in a given time zone for the alarm clock, there are the following options: autoplay, repeat interval, application volume works on Android Wear. Such watches display time in international format, date, timer, stopwatch and all other functions of the application in a simple version. A watch widget is available free of charge. It looks good on the home screen of your smartphone and tablet. You can choose a theme for a widget: the dial with arrows or a digital clock. Downloads: 5000000 + Customer Rating: (4.1/5) DIGI Widget DIGI DIGI Watch DIGI is the simplest and convenient to use watch on Android OS! It can be tailored to the needs of any user. The interface and options. The properties of each widget displayed are very easy to adjust because of the available settings. Just press and hold your finger on the widget icon and you'll be taken to the options section. At first, you can configure the time. Here you can set the correct time, as well as display seconds (if you need them), the display format (24 hours or 12 hours), etc. You can then adjust the date section. There you will need to decide whether or not to display the date, where to translate it, and which language to choose. After completing the above options, you can switch to selecting the date and time style. After the basic edit is complete, you can move to the category of the background that will be in harmony with the clock. Main features of digi clock widget app: Set commands per click: Tap widget to turn on alarm, timer or other utility settings; the ability to switch between date formats; Select a color for numbers; Advanced settings for each section, as well as full customization for your requirements; Alarm clock icon; You can adjust the date in any convenient language; Nearly three dozen font styles to display the date and time on the screen. Downloads: 5000000 + Customer Rating: (4.5/5) World Watch & Widget Despite such an unpretentious name, this is a very simple widget and its design also does not make the widget widget of art. But its main function is to simultaneously display the current time in different time zones on the device's home screen. It is very useful for those who need to constantly see the time in different cities ... So as not to call a man when he's already asleep. Downloads: 5000000 + Customer Rating: (4.3/5) Retro Watch Widget It's a simple retro-clock. The application includes three styles of widgets, first and second are with size 1x2. One shows the time, the other – date. The third type is 2x4 and displays the time with the date. When you click the clock, the alarm clock menu opens, and if you click the date, the calendar begins. To change the style (color, transparency, background) and set startup icons, you'll need to download an extra for a fee. Then, you can change the of the application. The retro-design of electronic watches attracts many users. The widget looks stylish. It's easy to use and has a beautiful interface. If you like classic digital watches, maybe you choose this particular widget. Downloads: 5000000 + Customer Rating: (4.2/5) Nixie Watch Widget This watch is made in the style of lamp technology. It's worth noting that they're quite popular now. They'll look pretty organic on the main smartphone screen. The applet displays not only the date and time but also the seconds. You can select the widget size from 1x2 and 1x4. The owner of Android OS 3.1 or higher can manually set the clock size. A paid version of the program allows you to view additional options on a widget. It can be date, time zone, time and any user text. The watches in the style of antique lamp technology are still popular and will look great on your phone's main screen. Downloads: 100000 + Customer Rating: (4/5) Luxurious Widgets Fancy Widgets is a nice widget that supports a bunch of features with lots of settings. The main functions of fancy widgets are the weather and the clock. It seems to be nothing supernatural, however, the appearance of this widget can be customized to any of your preferences, including the most minor details. You can change the time format, weather temperature, geolocation, widget update interval and more – all of this is available in this application. In addition, directly from the application, you can download a theme for your widget from the many options that are displayed (of course, if you have an active Internet connection). There are many settings, but once spent twenty minutes on it, you can create a really comfortable and beautiful widget. The application has a lot of widgets – for every taste and color. The most compact cell occupies only one virtual cell on the screen, and the most informative can take an entire tab on the screen at a small resolution. Downloads: 5000000 + Customer Rating: (4.1/5) ClockQ — The ClockQ widget digital clock widget has a large number of settings and is able to view additional data. In parameters, you can select one of 26 font types, customize the color of each widget element, transparency, shadow, clock and date format, and more. Buying a premium version of the program, the user can change the elements of the widget. You'll have several types of fonts and the ability to view the battery charge you have. If you belong to people who can set the appearance of each component for hours to achieve their perfect combination, be sure to pay attention to ClockQ. Downloads: 1000000 + Customer Rating: (4.3/5) This widget chronos can be applied to both the desktop and the lock screen, what immediately identifies it among its analogs. In addition to the clock, you can configure the weather and event view in your calendar. And it can all be customized for you. Now Chronos is completely free on Google Play Store. In the free version, users can select the clock type, customize fonts, and choose the type of icons. The calendar displays upcoming events that the user can customize by changing the color and text. The key claims that over time, the functionality will be extended. To install Chronos, you need a device with an Android version of at least 4.1. Although this version will only have a widget available for the desktop. But for Android devices 4.2 or higher, full functionality is available, including a widget for the lock screen. Downloads: 1000000 + Customer Rating: (4.4/5) Night Time The rapid development of clock widgets has become a prerequisite for the development of special applications, optimized for evening and evening work. Among all existing programs, the leader is the night time. The main feature of this program is convenient view of the information needed on the screen. As a result, at night, the user will receive data about the time, date, day of the week, and battery charge. Backlighting the information display won't be blind and irritating. You can start the NightClock applet by connecting the device to the charger. This product is ideal for those who often wake up at night and want to get information in light mode. Downloads: 1000000 + Customer Rating: (4.2/5) One more watch widget and one more watch widget is wonderful, most importantly a very useful application for your smartphone on the Android platform.
